2019 EVBox Factsheet

Our company

We're the leading global manufacturer of electric vehicle charging stations and charging management software.

Our vision

We envision a future where everyday transport is electric, emissions-free, and sustained by a green charging infrastructure.

Our mission

Our mission is to help build a future where everyday transport is self-sustained and emission-free by bringing smart and scalable charging solutions to electric vehicles around the world. To realize this we will install 1 million charging points by 2025.

Our solution

We offer electric vehicle charging solutions with uncompromising quality and reliability. Our charging solutions maximize the return on investment while minimizing costs. From the installation, to tracking and billing of all charging sessions. We help everyone operate and manage their charging stations with ease and efficiency.

Our partners and customers

Energy utilities, mobility service providers, distributors, installers, resellers / eCommerce, car manufacturers, car dealerships, leasing companies, public organizations, local governments, electric vehicle drivers, workplaces, real estate, retail and hospitality, commercial parking, commercial fleets.

Our history

Founded in 2010, we made our breakthrough when the market for electric vehicles (EVs) was still in its infancy. Our founders set their hearts and eyes on a clear concept: a fully modular charging station that facilitates easy installation, maintenance upgrades, and above all, uncompromising quality and durability.

Soon, we became the sole supplier of public charging infrastructure in cities such as Amsterdam, Rotterdam and Monaco. Meanwhile, we played an active role in promoting Smart Charging technologies and roaming of charging infrastructure with industry partners and public organizations.

In 2017, we were acquired by energy utility and global service provider ENGIE, who identified us as a disruptive, leading cleantech company making a difference in the fast-growing industry of electric mobility.

In 2018, we acquired the ultra-fast charging station manufacturer EVTronic, adding 700 previously installed fast charging stations to our European network.

Today, with projects running across Europe, North America, and South America, we move forward by perfecting our original recipe with a second generation of hardware and software that are energy-efficient, future-proof, and easy to use.
